

## The EgoSecure Management Console An Overview

### The advantages of the EgoSecure console

- Clear and intuitive on-premises console
- Installs/updates the Avira client to endpoints silently, on-demand or automatically via policies
- Real-time security monitoring with detailed reports and stats
- Identification of potential security threats and update errors
- Alerts can be sent by email or SNMP and imported into SIEM and other systems
- Quick and easy installation - no external support required
- Seamless and fast interaction between functions with zero loss of performance
- Support for virtual environments
- Intuitive administration without the need to train the IT team
- Seamless integration into users' standard workflows
- Clear information on security related permission restrictions, avoiding the need to ask the Helpdesk

### Easy installation and fast configuration

- Centralized real-time management of the IT systems to be protected
- Full transparency of all systems and installed software including statistics
- Multi-tenancy architecture as well as multi-domain support (Microsoft Active Director, Novell eDirectory, openLDAP, Workgroups)

The EgoSecure management console is a breeze to install and use. Typically, users do not require any training as most protection functions are performed in the background.

The EgoSecure management console is free to use for new customers and those renewing existing licenses.

## About EgoSecure

### These products can be managed centrally

Avira  
Antivirus Pro –  
Business Edition

Avira  
Antivirus  
Server

Avira  
Antivirus  
for Endpoint

Avira  
Antivirus for  
Small Business

### System requirements

#### Hardware

##### Server:

- Memory: Min. 512 MB
- Disk space: Min. 1 GB

These EgoSecure Data Protection components are installed on the server:

- EgoSecure management console
- EgoSecure server
- EgoSecure admin tool

##### Client:

- Memory: Min. 512 MB
- Disk space: Min. 1 GB

EgoSecure Data Protection installs the EgoSecure agent on the client.

#### Software

##### Server:

- **Database:** All Microsoft SQL Server versions currently supported by Microsoft as well as MySQL Community Server 5 or later
- **Operating system:** All Microsoft Server OS versions currently supported by Microsoft

##### Client:

- **Operating system:** All Microsoft client OS versions currently supported by Microsoft

All 32-bit and 64-bit versions are supported. Limited support is offered for embedded versions.

Our *egosecure data protection* solution has made us the innovation leader in data protection solutions for over a decade. Our initial product version was developed in 2005 in the south-western German town of Ettlingen, where the company is still headquartered. Since then, we have been able to win-over well in excess of 2,000 customers of all sizes and from many industries. After analyzing the dataflow and determining the vulnerabilities using Insight and IntellAct, protective measures can be configured individually with 20 protection functions. These protection functions are based on the C.A.F.E. (Control, Audit, Filter, Encrypt) MANAGEMENT PRINCIPLE. Our solution offers quick and easy installation without complex and costly consulting. EgoSecure Data Protection is built mainly on solutions developed in-house, so it is installed, administered, and operated in a similar way. All protection functions focus on making life as easy as possible for the user, while they remain secure and protected. This is what we call simply beautiful IT security.

EgoSecure participates in distribution and technology partnerships around the globe, and protects over 2,100 international companies of all sizes and in diverse industries. EgoSecure is especially popular for protecting data in critical infrastructures. The product portfolio provides effective and efficient solutions for issues currently facing the market, including industrial espionage, compliance, cloud security, and Industry 4.0.
